

Complet JavaScript Concepts

1. History of JavaScript

JavaScript ko 1995 mein Brendan Eich ne develop kiya tha, jab wo Netscape Communications mein kaam kar rahe the. Pehle iska naam "LiveScript" tha, lekin baad mein iska naam JavaScript rakha gaya. "Interesting baat yeh hai ke development 10 din mein ho gaya tha." Yeh primarily web pages ko interactive banane ke liye use hota hai.

2. Introduction to JavaScript

JavaScript ek programming language hai jo webpages ko dynamic aur interactive banane ke liye use hoti hai. Yeh HTML aur CSS ke saath milkar modern web applications ko run karta hai. JavaScript ek high-level,

interpreted, object-oriented programming language hai jo mainly client-side scripting mein use hoti hai.

3. Why Do We Need JavaScript?

JavaScript ka use webpages mein interactions ko handle karne ke liye hota hai. Jaise forms submit karna, buttons par click hone par actions perform karna, animation effects dena, aur data ko dynamically update karna. Yeh modern websites aur applications mein essential hai.

4. Data Types

- 1. String**
- 2. Number**
- 3. Boolean**
- 4. Undefined**
- 5. Null**
- 6. Symbol**
- 7. Bigint**
